

Proven Genetics Is Feature Of Flying H Bulls

CLINTON, MO.

Flying H Genetics is a leading supplier of SimAngus, Balancer, Simmental, Gelbvieh, and Angus genetics throughout the Midwest. We have dedicated ourselves to developing pasture ready bulls out of industry proven genetics the “right” way. Our Grown On Grass™ program is a proven process for testing fescue tolerance, hardiness, and overall durability. Bulls that make it through this process are ready to go to work immediately during their first breeding season and are free of all the health & soundness problems associated with feedlot tested bulls. We have labeled these bulls Roughage ‘N’ Ready for their ability to work harder, last longer, and sire crossbred calves with more value.

We currently supply Midwestern cattlemen with over 280 bulls a year. Most of those bulls are 18 to 20 month-old bulls with a nice additional supply of yearling bulls. Furthermore, we are Missouri’s largest source for SimAngus and Simmental genetics – Black, Black white face, and red bulls.

Our easy-to-find development center and sale

location is located just south of Clinton, MO right off 13 Hwy. We have two sales per year at this location – third Saturday in March and Last Saturday in October. Visitors are always welcome.

Contact any member of the Flying H Team for more information about bulls, genetics, semen purchases, or commercial replacement females.
