

Schaffert Mfg. Profitable Seed Solutions For 2011 Planting Season

INDIANOLA, NEB.

For the 2011 planting season we are very pleased to announce the release of our New Zipper Closing Wheel. Use the Zipper Closing Wheel in place of your rubber wheel, or order just the ring and use your existing wheel. The Zipper's unique design feathers soil into the furrow with minimal compaction, and is made to work in tough soil conditions. The Zipper Closing wheel is constructed of long wear, heavy duty cast metal, and the angled bar prevents the wheel from plugging. Increased productivity is built into the design! Farmers have the option to use the Zipper on both wheels or alternate them. Call for details or visit www.schaffert.com for more info.

with the New Zipper Closing Wheel, we are

also introducing our New and Improved IH Fertilizer Disc. Specifically designed for Case IH Planters. The new IH Fertilizer Disc bolts in place of the current 8" concave disc that comes standard. The straight disc creates a slice for the liquid to go in and maintains the offset of the original disc to ensure the furrow is getting closed. Each unit comes standard with triple sealed bearings and stainless steel hardware for long wear and durability. Optional cone can be used to keep splatter and liquid off gauge wheel. Use the New and Improved IH Fertilizer Disc for high pressure liquid injection or low pressure, customizable to fit your needs. Call for details or visit www.schaffert.com for more info. Contact Paul Schaffert, Schaffert Mfg. & Sales, Indianola, NE at 800-382-2607, sales@schaffert.com. Δ
