

Schaffert Mfg. Profitable Seed Solutions

INDIANOLA, NEB.

Consistency, durability, and a true pioneer in the industry. All come together in our innovative line of planter and drill attachments. For 10 years we have consistently maintained the shape and concept of the Rebounder Seed Cover. However, as a true pioneer, we are continually researching ways to make it better, knowing and understanding the needs farmers face today.

A few years ago we came out with the Super Tuff Orange Rebounder, lasting 2-3 times longer than the original White Rebounder. The concave design guides the seeds to the bottom of the furrow creating enhanced uniform emergence. The response has been phenomenal, farmers nationwide rave about the durability of the Orange Rebounder.

Earlier this year, we came out with the New Fertilizer Disc. This new liquid disc is designed for John Deere, Kinze, and White Planters. It has a center pivot design for constant pressure and flexibility. The New Fertilizer Disc is designed to fit most angular press wheel brackets, has a 9 inch steel disc, with triple sealed bearing, and oil impregnated pivot bushings. Designed for all soil types/conditions and has similar features of the 2x2 systems. Call for further details and ask about our Product

Demo DVDs!

In 2008, we also launched a new Optional Fitting for our Rebounder™ Seed Covers, called the Straight Shot. The Straight Shot works very well on planter or drills that have press wheels that run on, or in the furrow. The Straight Shot will keep the fertilizer from caking up on the press wheel. Also works very well when liquid inoculants or insecticides need to be put directly on the seed. It replaces the threaded quick coupler, takes less than 5 min. to install, and mounts in the same spot as the Y from the Y-Not Split-It kit.

For the 2009 planting season we are expecting to have a new Gauge Wheel Arm. Specifically designed for John Deere and Kinze Planters. The new arm will work with Schaffert Mfg.'s Wheel Scrapers and will be available as a kit or sold separately. The main benefit to having the new Gauge Wheel Arm is that no welding is required for it to be attached. The Cast Scraper Bracket is molded on for easier installation. The flip arm fits right or left side with 2 zerks that allow you to grease from the top of the unit. Adjustments can now be made easier with the adjustable threaded bushing insert.
